

Job Title: Junior Programmer

Type: Full time

Description: Disbelief is a game development studio focusing on contracting and consulting services. We've worked with both AAA and independent studios to help their projects ship. Notable projects we've worked on include *Gears 5*, *Borderlands 3*, *Gears of War 4*, and *Torn*.

At Disbelief we value work-life balance, and want to create an alternative to the crunch-culture prevalent in game development. We also believe strongly in investing in our talent and our team. Disbelief is a place to puzzle out the solutions to cutting-edge problems in graphics and engine programming, but also a place where people can grow their careers and skill sets as valued members of a stable and close knit team.

Currently, we're looking for a junior programmer. This opportunity is for a full-time position in Cambridge, MA or Chicago, IL. Junior programmers at Disbelief are called on to develop and debug in a variety of areas from game play to core engine programming. You are expected to learn new systems and projects as you grow as a developer, with support and training from more senior members of the team. Most importantly, you will work to solve problems with the help of the team. We work with leading edge technologies to make them perform at the top of their capabilities, and we take pride in solving problems others can't.

We believe a diverse team is a stronger team, and we encourage marginalized programmers to apply.

Key Responsibilities

- Clearly communicate your work to others
- Debug code
- Estimate task work
- Consider performance when writing code
- Document your code

Skills and Requirements

- BA/BS in Computer Science, or equivalent experience
- Excellent communication skills, both verbal and written
- Some type of systems programming in any language.
- Good understanding of C++
- Knowledge of version control with P4, git, or equivalent

Location: Chicago, IL

Remote: No, but we do enjoy working from home up to two days a week, when project constraints allow.

Visa Sponsorship: No

Technologies: Most of our work is C++ of varying standards with a sprinkling of other languages as needed for tooling. We do a lot of graphics programming work, using shader languages and platform graphics APIs. Since we often are debugging the lower levels of systems, being able to read x64 or ARM assembly is useful. Primarily we work with Unreal Engine 4, but we also work with Unity and custom game engines. Our work uses rendering, physics, audio, VR, AR, and other APIs frequently. Our primary platforms are PC, Xbox One, PS4, Switch, and VR/AR devices.
